

Hoses for the Plastics Industry

Hoses & Connectors for the
Entire Production Process

 **MASTERFLEX**
Connecting Values

A MASTERFLEX GROUP COMPANY

Masterflex – Your partner for high-tech hose systems

The field of plastics processing is a multifaceted process with the end-results being form-moulded components, semi-finished products, fibres, films or foils. During processing, granules and powders are often conveyed over long distances, placing increased demands on hoses and pipelines. Masterflex products leave nothing else to be desired when it comes to fulfilling the greatest demands and most stringent requirements for quality, abrasion-resistance, flexibility, durability and reliability.

Here, we provide you with an overview of our products, which are specifically designed for conquering the daily challenges in the world of plastics processing: from highly abrasion-resistant hoses for granule transport, temperature-proof hoses for granule drying, Master-PROTECT Pipe-Bends, electrically heated hoses for the transport of liquid plastics and adhesives, right through to all of the corresponding fittings and connectors. Here you can find everything you need for achieving greater success throughout the entire production process.

Hoses for the Plastics Industry / Silo Filling

Plastic is delivered in the form of granules. These plastic granules are transported pneumatically into large silo containers via long hoses before being forwarded onto the distribution stations (hose stations). Once there, they are distributed to the granule drying stations.

Master-PROTECT Pipes & Pipe-Bends in silo applications

Silo Filling

The pneumatic transport places great demands on the durability of the hoses applied. The transport medium is conveyed through the hoses using high-pressure or vacuum from the trucks and into the silos. Signs of wear and tear often appear, as the impact of the plastic particles on the inner hose wall has a hugely abrasive effect.

Further along in the process, the plastic granules are sent from the silos to the distribution stations. Long transport distances are often bridged using pipelines. For shorter distances, such as between the pipes and the distribution stations themselves, hoses, connectors and pipe-bends are applied. Once at the distribution station, the raw material is then forwarded on to the granule drying process.

The highly abrasive suction & transport hoses from Masterflex are specifically designed for application in these areas. The hoses consist of polyester-polyurethane, which in comparison to the otherwise conventional and widely-applied polyether-polyurethane or PVC, offers greatly improved durability and service life. This is highlighted even more when transporting granules with a high GFRP ratio (glass-fibre reinforced plastic).

The transparent hose wall guarantees a constant view of the media being transported. Thanks to their unique and innovative design, the hoses are extremely flexible and can therefore be installed quickly and easily, no matter how tight the installation space.

Excellent flow properties, unbeatable abrasion-resistance and extreme flexibility - these features and many more are what make Masterflex hoses the perfect choice for these applications. Have a look at our products in the following pages to find out more.

Delivery of plastic granules & filling of silos using pneumatic conveyors

Distribution station (hose station), forwarding of raw materials for granule drying

Hoses for the Plastics Industry - Silo Filling

Master-PUR HX Trivolution®

**PU Transport hose & Suction Hose,
highly abrasion resistant and
vacuum proof, with reinforcement
underneath the spiral, antistatic,
surface resistance < 10⁹ Ohm,
microbe-resistant, hardly inflammable
acc. to DIN 4102 B1**

NEW!

Now permanently antistatic
+ hardly inflammable
+ microbe-resistant

Material

- wall: pure polyester polyurethane
(acc. to DIN ISO 4649 more abrasion-resistant in comparison to polyether polyurethane)
- **wall thickness between spirals approx. 2.0 mm**, depending on DN
- spiral: spring steel wire

Applications

- For greater requirements on abrasion resistance and durability
- Suction & transport hose for extremely abrasive media
- Flat-roof gravelling
- Working hose for silo vehicles and cargo depots
- Transport hose for problematic media, e.g. sand, gravel, etc.

Properties

- hardly inflammable acc. to DIN 4102 B1
- permanently antistatic, surface resistance < 10⁹ Ohm acc. to DIN EN ISO 8031
- acc. to TRGS 727 and ATEX 2014/34 EU
- microbe-resistant
- extremely abrasion resistant via specific reinforcements underneath the spiral
- good resistance to chemicals, oil and fuel
- flexible
- halogen and plasticizer-free
- smooth inner lining, optimum flow characteristics
- high vacuum and apex pressure resistance
- highly durable, long service lives
- generally good UV and ozone

Temperature Range

- -40°C to +90°C
- peaks to +125°C

DN	Op Pressure c. bar	Vacuum c. bar	Bend Radius c. mm*	Outer Ø c. mm	Weight c. kg/m	Article No.	max. Production Length

Hoses for the Plastics Industry - Silo Filling

Master-PUR Performance®

**PU suction hose & transport hose,
extremely abrasion-resistant &
vacuum-proof, seamless smooth
inner lining, antistatic and
microbe-resistant,
surface resistance < 10⁹ Ohm**

NEW!

**Totally smooth,
totally abrasion-resistant,
totally flexible**

Material

- spiral: spring steel wire
- wall: pure polyurethane
- **wall thickness min. 2.5 mm**
- inner lining: application-optimised polyurethane
60° Shore A

Applications

- Transport hose for problematic media, e.g. sand, gravel, grain, granules
- Transport hose for handling and conveying plants
- Everywhere where easy-to-clean surfaces are required
- Suction and transport hose for extremely abrasive solid, liquid and gaseous media
- Transport hose for feeding and cleaning of glass works, mineral processing plants, steelworks, quarries, shipyards and docks, cement works, flat roof graveling
- Other conveyer and loading plants

Properties

- flexible
- permanently antistatic, surface resistance < 10⁹ Ohm acc. to DIN EN ISO 8031
- acc. to TRGS 727 and ATEX 2014/34 EU
- microbe-resistant
- good resistance to chemicals, oil and fuel
- completely smooth internal lining, therefore ideal flow characteristics
- high tensile strength
- excellent vacuum-resistance and good pressure-resistance
- halogen and plasticizer-free
- generally good UV and ozone resistance

Temperature Range

- -40°C to +90°C
- peaks to +125°C

Hoses for the Plastics Industry - Silo Filling

Master-PUR Inline

PU Suction hose & Transport Hose, extremely abrasion resistant, vacuum proof, seamless, very smooth inner lining, antistatic, surface resistance < 10⁹ Ohm, microbe-resistant

Material

spiral: spring steel wire
wall: pure polyurethane
Inline: application-optimised polyurethane, **4mm thick**, 60 ° Shore A

Applications

- Transport Hose for problematic media, e.g. sand, gravel, grain, granulates
- Everywhere where easy-to-clean surfaces are required
- Special hose for transport of extremely abrasive media
- Transport hose for feeding and cleaning of glass works, mineral processing plants, steelworks, quarries, shipyards and docks, cement works, flat roof gravelling
- Other conveyer and loading plants

Properties

- high vacuum and good pressure resistance
- extremely abrasion-resistant, extra strong PU Inline
- generally good UV and ozone resistance
- good resistance to chemicals, oil and fuel
- free of halogens and plasticizers
- high tensile strength
- completely smooth internal lining, therefore ideal flow characteristics
- flexible
- microbe-resistant
- antistatic, surface resistance < 10⁹ Ohm acc. to DIN EN iso 8031

Temperature Range

- 40°C to +90°C
- peaks to +125°C

Hoses for the Plastics Industry - Silo Filling

Master-PROTECT Pipe-Bend

PU-lined Pipe-Bend

Material

lining: polyurethane
bend: DIN 2448 St 37, primed
flange: R St 37, primed

Applications

- Pneumatic conveying plants

Properties

- extremely abrasion-resistant
- pressure level PN 6 and PN 10/16
- significantly lower pressure loss than with deflection / impact absorbers
- lower risk of blockages via uniform concentration distribution and a more constant speed of transported goods
- much greater wear resistance than steel pipe bends
- reduced operating costs via longer maintenance intervals
- no displacement of transport media

Temperature Range

- -40°C to +80°C
- peaks to +110°C

DN	d in mm	PN	A mm	Adapter Outer Ø	Hole Circle	No. Holes	Article No.

200	207	6	360	320	280	8	B01-200-006

All data refers to a media and ambient temperature of +20 °C. Order-specific production in the above listed sizes, lengths and pressure steps. Available on request in other DN sizes and in stainless steel. Subject to technical changes and colour deviations.

Hoses for the Plastics Industry / Granule Drying

Suction & transport hoses used for filling granule dryers along with temperature-proof hoses for transporting the air for the dryer itself

In the field of plastics processing, granule drying plays an integral role. Plastic absorbs moisture and humidity from the air around it. This can lead to drastic deficiencies in the end product. That's why the drying of the granules is such an important phase of the process - especially when having to allow for the recommended residual moisture tolerances of the raw material manufacturers

Granule Drying

Before the plastic granules can be melted later on in the injection-moulding and extrusion process, the moisture and humidity must first be removed. This pre-drying significantly improves the processing properties of the plastic granules. The air drying is the most widely used method in the plastics industry.

Dry, warm air flows through the granules, removing any remaining moisture and forwarding this to a drying agent.

Masterflex's temperature-resistant hoses are especially suitable for the suction and extraction of warm air during the drying process. These specialist hoses are designed to withstand temperatures of up to +250 °C.

The hoses are made from single or multi-layered strips of vulcanised fabric coiled together in overlap and further equipped with an inner steel helix, which is either hidden or bare. The hoses feature a smooth inner lining, provide good pressure-resistance and are extremely flexible, making installation quick and easy no matter where they are applied.

Hoses for the Plastics Industry - Granule Drying

Master-NEO 1

**Medium & High
Temperature Hose for
temperatures up to +135 °C**

Material

spiral: spring steel wire
cord: fibreglass fabric
wall: neoprene-coated glass fabric

Applications

- Chemicals industry
- Vehicle manufacturing
- Aircraft manufacturing
- Hot air hose for granulate dryer
- Machine and engine manufacturing
- Shipbuilding
- Plastic processing industry
- Waste incineration plants
- Conveyance of air and gaseous media with high nominal and ambient temperatures

Properties

- light
- smallest bending radius
- good chemical resistance
- mostly smooth inner lining
- highly flexible
- symmetrical fold behaviour
- approved acc.to DIN 75200 and FMVSS 302 for application in transit vehicles
- bend-proof
- fixed vulcanised wall and steel filament

Temperature Range

- -35°C to +135°C
- peaks -55°C to +150°C*

Connectors & Fittings, please see
Chapter 4, from page 22 onwards.

Hoses for the Plastics Industry - Granule Drying

Master-NEO 2

**Medium & High Temperature Hose
for temperatures up to +135 °C,
double-layered**

Material

spiral: spring steel wire
cord: fibreglass fabric
wall: neoprene-coated glass fabric, double-layered

Applications

- Chemicals industry
- Vehicle manufacturing
- Aircraft manufacturing
- Conveyance of air and gaseous media with high nominal & ambient temperatures with greater mechanical requirements
- Hot air hose for granulate dryer
- Machine and engine manufacturing
- Shipbuilding
- Plastic processing industry
- Waste incineration plants

Properties

- light
- smallest bending radii
- good chemical resistance
- mostly smooth inner lining
- highly flexible
- symmetrical fold behaviour
- bend-proof
- fixed vulcanised wall and steel filament

Temperature Range

- -35°C to +135°C
- peaks -55°C to +150°C*

Hoses for the Plastics Industry - Granule Drying

Master-SIL 1

Medium & High Temperature Hose
for temperatures up to +250 °C

Material

spiral: spring steel wire
cord: fibreglass fabric
wall: silicone-coated glass-fibre fabric

Applications

- Chemicals industry
- Vehicle manufacturing
- Aircraft manufacturing
- Hot air hose for granulate dryer
- Machine and engine manufacturing
- Shipbuilding
- Plastic processing industry
- Waste incineration plants
- Conveyance of air and gaseous media with high nominal & ambient temperatures

Properties

- light
- smallest bending radius
- good chemical resistance
- mostly smooth inner lining
- highly flexible
- symmetrical fold behaviour
- bend-proof
- fixed vulcanised wall and steel filament

Temperature Range

- -70°C to +250°C
- peaks -85°C to +300°C

Hoses for the Plastics Industry - Granule Drying

Master-SIL 2

**Medium & High Temperature Hose
for temperatures up to +250 °C,
double-layered**

Material

spiral: spring steel wire
cord: fibreglass fabric
wall: silicone-coated glass-fibre fabric,
double-layered

Properties

- light
- smallest bending radius
- good chemical resistance
- mostly smooth inner lining
- highly flexible
- symmetrical fold behaviour
- bend-proof
- fixed vulcanised wall and steel filament

Applications

- Chemicals industry
- Vehicle manufacturing
- Aircraft manufacturing
- Conveyance of air and gaseous media with high nominal & ambient temperatures with greater mechanical requirements
- Hot air hose for granulate dryer
- Machine and engine manufacturing
- Plastic processing industry
- Waste incineration plants

Temperature Range

- -70°C to +250°C
- peaks -85°C to +300°C

Hoses for the Plastics Industry / Production Process

Once the drying process is complete, the plastic granules are then processed. Extrusion, Co-extrusion, Injection-Moulding or Bubble-Packaging manufacturing are typical production process in the plastics industry

Production Process

During the course of the production process, many different types of hoses are applied. Highly abrasion-resistant suction & transport hoses are used for the transport from the granule dryer to the production lines.

The next stage is the melting of the granules themselves. The liquidised plastic is then sent to an extrusion tool, for example. This part of the process is made easier through the use of electrically heated hoses, such as the high-tech **templine®** heated hose from Masterflex. Thanks to its innovative use of integrated heat conductors, this patented Masterflex hose guarantees a constant and evenly distributed temperature. Its unique construction design also ensures that, even with the most extreme bending and torsional distortions, the heat conductors never leave contact with the hose surface and therefore prevent any overheating or cooling of the liquid plastic. High pressure loads are no problem for the Masterflex **templine®** heated hoses.

Everywhere where heat is created for a melting process, hot air is the direct result. Temperature-resistant hoses from Masterflex always provide the best answer for applications in extractor units. Air with temperatures of up to +250 °C can be extracted with ease.

3 wishes at once!

The suction & transport hoses from Masterflex are usually microbe-resistant, permanently antistatic acc. to the TRBS 2153 (ATEX) standard, as well as being hardly inflammable acc. to DIN 4102 B1. The combination of these three features, however, offers a much wider spectrum of possible applications. Choosing the right product and dealing with spiralling storage costs just got much easier.

Masterflex hoses provide real added value

- and at no extra cost!

Electrically heated hoses applied in injection-moulding.
The liquid plastic must be kept at a constant temperature.

Temperature-proof hoses used for extracting hot air
for the manufacturing of bubble packaging

Hoses for the Plastics Industry - Production Process

Master-PUR L Trivolution®

**PU Suction hose & Transport Hose,
extremely flexible, light duty,
antistatic, surface resistance < 10⁹ Ohm,
microbe-resistant, hardly
inflammable acc. to DIN 4102 B1**

Material

- wall: pure polyester polyurethane
(acc. to DIN ISO 4649 more abrasion-resistant in comparison to polyether polyurethane)
- **wall thickness between spirals approx. 0.7 mm**
- spiral: spring steel wire

Properties

- hardly inflammable acc. to DIN 4102 B1
- permanently antistatic, surface resistance < 10⁹ Ohm acc. to DIN EN ISO 8031
- acc. to TRGS 727 and ATEX 2014/34 EU
- microbe-resistant
- good resistance to chemicals, oil and fuel
- smallest bending radius
- optimum flow characteristics
- highly abrasion-resistant
- light, very good flexibility
- halogen and plasticizer-free
- high tensile strength
- generally good UV and ozone resistance

Applications

- Transport of fine-grained particles, e.g. dust & powder
- Suction/extraction of paper and textile fibres
- Suction & transport hose for abrasive solids, liquids & gases
- Protective hose against mechanical wear
- Oil mist extraction/suction

Temperature Range

- -40°C to +90°C
- peaks to +125°C

Hoses for the Plastics Industry - Production Process

Master-PUR H Trivolution®

**PU Suction hose & Transport Hose,
very flexible, antistatic, surface
resistance < 10⁹ Ohm, microbe-
resistant, hardly inflammable acc. to
DIN 4102 B1**

NEW!

**Now permanently antistatic
+ hardly inflammable
+ microbe-resistant**

Material

- wall: pure polyester polyurethane
(acc. to DIN ISO 4649 more abrasion-resistant in comparison to polyether polyurethane)
- **wall thickness between spirals approx. 1.4 mm**
- spiral: spring steel wire

Applications

- Suction of coarse-grained media with high flow rate
- For abrasive solids, gaseous and liquid media
- Standard hose for industrial vacuum cleaners
- Granulate transport hose
- Transport of chips/shavings
- Suction and transport of paper fibres
- Oil mist extraction/suction

Temperature Range

- -40°C to +90°C
- peaks to +125°C

Properties

- hardly inflammable acc. to DIN 4102 B1
- permanently antistatic, surface resistance < 10⁹ Ohm acc. to DIN EN ISO 8031
- acc. to TRGS 727 and ATEX 2014/34 EU
- microbe-resistant
- highly abrasion-resistant
- good resistance to chemicals, oil and fuel
- small bending radius
- optimum flow characteristics
- high tensile strength
- medium duty
- good flexibility
- free of halogens and plasticizers
- generally good UV and ozone resistance
- increased pressure and vacuum resistance

Hoses for the Plastics Industry - Production Process

Master-PUR HX Trivolution®

**PU Transport hose & Suction Hose,
highly abrasion resistant and
vacuum proof, with reinforcement
underneath the spiral, antistatic,
surface resistance < 10⁹ Ohm,
microbe-resistant, hardly inflammable
acc. to DIN 4102 B1**

Material

- wall: pure polyester polyurethane
(acc. to DIN ISO 4649 more abrasion-resistant in comparison to polyether polyurethane)
- **wall thickness between spirals approx. 2.0 mm**, depending on DN
- spiral: spring steel wire

Applications

- For increased requirements of abrasion resistance & durability
- Suction & transport hose for extremely abrasive media
- Flat-roof gravelling
- Working hose for silo vehicles and cargo depots
- Transport hose for problematic media, e.g. sand, gravel, etc.

Temperature Range

- -40°C to +90°C
- peaks to +125°C

Properties

- hardly inflammable acc. to DIN 4102 B1
- permanently antistatic, surface resistance < 10⁹ Ohm acc. to DIN EN ISO 8031
- acc. to TRGS 727 and ATEX 2014/34 EU
- microbe-resistant
- extremely abrasion resistant via specific reinforcements underneath the spiral
- good resistance to chemicals, oil and fuel
- flexible
- halogen and plasticizer-free
- smooth inner lining, optimum flow characteristics
- high vacuum and apex pressure resistance
- highly durable, long service lives
- generally good UV and ozone

Hoses for the Plastics Industry - Production Process

Master-PUR Performance®

PU suction hose & transport hose,
extremely abrasion-resistant &
vacuum-proof, seamless smooth
inner lining, antistatic and micro-
be-resistant,
surface resistance < 10⁹ Ohm

NEW!
Totally smooth,
totally abrasion-resistant,
totally flexible

Material

- spiral: spring steel wire
- wall: pure polyurethane
- **wall thickness min. 2.5 mm**
- inner lining: application-optimised polyurethane
60° Shore A

Applications

- Transport hose for problematic media, e.g. sand, gravel, grain, granules
- Transport hose for handling and conveying plants
- Everywhere where easy-to-clean surfaces are required
- Suction and transport hose for extremely abrasive solid, liquid and gaseous media
- Transport hose for feeding and cleaning of glass works, mineral processing plants, steelworks, quarries, shipyards and docks, cement works, flat roof graveling
- Other conveyer and loading plants

Properties

- flexible
- permanently antistatic, surface resistance < 10⁹ Ohm acc to. DIN EN ISO 8031
- acc to. TRGS 727 and ATEX 2014/34 EU
- microbe-resistant
- good resistance to chemicals, oil and fuel
- completely smooth internal lining, therefore ideal flow characteristics
- high tensile strength
- excellent vacuum-resistance and good pressure-resistance
- halogen and plasticizer-free
- generally good UV and ozone resistance

Temperature Range

- -40°C to +90°C
- peaks to +125°C

Hoses for the Plastics Industry - Production Process

Polderflex PUR

**PU Suction & Transport Hose,
extremely pressure and vacuum
resistant, smooth inner and
outer linings**

Material

- spiral: spring steel wire
- wall: pure polyester polyurethane
(acc. to DIN ISO 4649 more abrasion-resistant in comparison to polyether polyurethane)
- wall thickness 3 - 5 mm depending on DN

Applications

- Suction/extraction of glass splinters, glass wool, mineral wool, slag, mill scale and sinter
- Suction & Transport Hose for quarries, cement works, shipyards and docks
- Working Hose for silo vehicles and cargo depots
- for highest standards of abrasion resistance and durability
- Transport hose for handling and conveying plants
- Refurbishment of rail systems
- Transport of gravel and rocks
- Suction & Transport Hose for the most extreme fields of application

Properties

- very good flexibility
- high vacuum and good pressure resistance
- highly durable, long service lives
- extremely abrasion resistant, extra strong PU lining
- generally good UV and ozone resistance
- good resistance to chemicals, oil and fuel
- free of halogens and plasticizers
- high tensile strength
- smooth inner and outer linings

Temperature Range

- -40°C to +90°C
- peaks to +125°C

Master-SANTO SL

**TPV Transport & Suction Hose,
very light duty, for increased
temperatures**

Material

- spiral: spring steel wire, TPV-coated
- wall: TPV-coated polyester fabric

Applications

- Steam extraction
- Air supply and extraction in engine applications
- Conveyance of hot and cold air in vehicle and machine manufacturing
- Gaseous media

Properties

- halogen and plasticizer-free
- extremely flexible
- smallest bending radii
- generally good UV and ozone resistance
- acc. to TRGS 727 and ATEX 2014/34 EU
- smooth inner lining
- good resistance to acids, alkalis and solvent fumes
- very light

Temperature Range

- -40°C bis +130°C
- peaks to +150°C

Hoses for the Plastics Industry - Production Process

Master -SANTO L

**TPV Transport & Suction Hose,
light duty, for increased
temperatures**

Material

- spiral: spring steel wire
- wall: thermoplastic vulcanisate (TPV)

Applications

- Protective Hose against mechanical wear
- Steam extraction
- Air supply and extraction in engine applications
- Conveyance of hot and cold air in vehicle and machine manufacturing
- Liquid and gaseous media

Properties

- halogen and plasticizer-free
- extremely flexible
- light
- smallest bending radii
- generally good UV and ozone resistance
- mostly smooth inner lining
- optimum flow characteristics
- acc. to TRGS 727 and ATEX 2014/34 EU, with earthing at both ends of the spiral for non-flammable dust/bulk solids in Zone 22. For gases/liquids with low conductivity of electrostatic charges in Zone 2.
- good resistance to acids, alkalis and solvent fumes

Temperature Range

- -40°C bis +130°C
- peaks to +150°C

Hoses for the Plastics Industry - Production Process

templine® Heated Hose

**Electrically Heated Hose System
for applications up to
+300 °C media temperature**

Material

- Medium hose made from PTFE with high chemical resistance
- Outer casing made from mechanically stable polyamide or abrasion-resistant aramide fibres
- Thermal insulation: optional silicone foam or silicon-free textile cord

Applications

- Anti-freeze, maintaining & increasing of temperatures for gases, granules and liquids of varying viscosity in temperature range -50 °C to +300 °C.

Properties

- good flexibility
- step-proof and antistatic design
- high power density (up to 250 W/m)
- nominal voltage (in operation): 12 ... 400 V
- different superstructures for hose pressures up to 500 bar and vacuum
- optional integrated temperature controller / safety temperature limiter
- connections (fittings) in steel / stainless steel / brass

Temperature Range

- PTFE smooth hose as well as all pressure-reinforced versions up to +220 °C
- corrugated metal hose +300 °C

Hoses for the Plastics Industry / Connectors & Fittings

For a fast and secure connection - Master-Grip Quick-Fix Clamp

Clamp collars for special applications in transporting problematic goods

It is often the connection of pipelines or hoses onto an existing system, which provides more difficult challenges than at first thought. That's why Masterflex offers the very best in connectors, fittings and customised solutions for all of your specific needs

It's all about the right connections!

Masterflex connectors are designed especially to provide the perfect connection of our hoses to your applications. The optimum in fit, seal and ease of use - no matter the conditions.

The connectors and fittings listed here are only a small selection of those offered by Masterflex for connecting our hoses to your existing machines, systems and pipes. The list of possibilities in the field of connections is almost endless. Ranging from a simple clamp through to the most fully-customised complex solutions - Masterflex makes the impossible possible.

The **Master-Grip** hose clamp, for example, is equipped with a special bridge, which covers the wire spiral to guarantee a tight connection. This hose clamp is also available with a tool-free Quick-Fix connector.

The **Combiflex** connection technology is available as screw-fit and cast-on versions. The easy docking of these connectors ensures a quick and time-saving installation of hoses and hose systems. This enables downtimes in your production plants to be significantly reduced - and your productivity to be drastically increased.

Master-Grip Hose Clamp, screwable

Special clamp for right-lay hoses

Material

- band collar, bridge, housing: steel

Applications

- Special clamp for lighter and medium weight, right-handed spiral hoses such as Flamex B-se, Flamex B-F se, Master-PUR, Master-PVC and Master-SANTO

Properties

- robust
- easy to install
- rust-protected
- primarily tight and tear-proof connection via bridge profiles

Master-Grip Quick-Fix Clamp

Special clamp for right-lay hoses

Material

- band collar, bridge, housing: steel (1.4301)

Applications

- Special clamp for lighter and medium weight, right-handed spiral hoses such as Flamex B-se, Flamex B-F se, Master-PUR, Master-PVC and Master-SANTO

Properties

- robust
- rust-free
- primarily tight and tear-proof connection via bridge profiles
- adjustable clamping force via clamping screw
- very easy to install
- subsequent quick mounting also possible for pre-installed hoses

Combiflex PU Swivel Flange

For counter-flanges acc. to
DIN 2632 / DIN 2632

Material

- swivel flange: aluminium
- collar: abrasion-resistant polyurethane

Temperature Range

- -40°C to +90°C
- peaks to +125°C

Applications

- Screwable plastic collar with loose flange for all Master-PUR L / H / SH / HX hose types

Properties

- shock-proof
- high tension-proof
- reusable and exchangeable
- simple mounting
- abrasion and microbe-resistant
- connection option without adjustable constriction of the cross-section
- surface resistance $\leq 10^{10}$ Ohm

All data refers to a media and ambient temperature of +20 °C. Available from stock in the above listed sizes in black. Available on request in permanently mounted version for watertight, tensile strengthened connections, other DN sizes, coloured. Subject to technical changes and colour deviations.

Combiflex PU Swivel Flange Inline

For counter-flanges acc. to DIN
2632 / DIN 2633 / DIN 2673

Material

- swivel flange: aluminium
- collar: abrasion-resistant polyurethane

Applications

- Cast-on PU loose flange for Master-PUR Inline
hose types

Temperature Range

- -40°C to +90°C
- peaks to +125°C

Properties

- abrasion-resistant
- gas/watertight
- lightweight
- microbe-resistant
- shock-proof
- high tension-proof connection
- front-flush hose integration
