

Active without pressure: The Clamping and Braking Element including spring-loaded energy storage MBPS.

The MBPS series is based on a dual-effective wedge slide gear with spring-loaded energy storage for clamping and braking without pressure. As a specific feature it has three pistons connected inline. This arrangement allows the use of a stronger spring at 4.5 bar. The stronger spring-loaded storage permits holding forces up to 4,700 N. The MBPS series is designed for braking on linear guides. Because of the material combination of the linear guide/contact section, the linear guide won't be damaged by the contact section.

In order to prevent damage from contamination with chips (chips between contact section and linear guide), the majority of elements can be fitted with original seals from the respective linear guide manufacturer as accessories. In order to guarantee the lifetime of the seals, follow the corresponding instructions from the respective linear guide manufacturer. Details on the length of the brake path to be expected can be obtained from our technical advisors. The computations are based on serial tests and our industrial experience.

MBPS Series

Technical data for MBPS series:

Rail size	15–55
Holding forces	750 N–4,700 N
Min. pressure	4.5 bar
Max. pressure	8 bar
Spring-loaded energy storage	✓
PLUS connection	-
Clamping cycles	5 mil. (B10d-value)
Braking cycles	2,000

Application scenarios for MBPS:

- Clamping in case of pressure drop
- Emergency OFF function
- Braking for linear motors
- Z-axes positioning in neutral position
- Machine table clamping of work centres

Connection options for MBPS:

The MBPS series has air connections on both sides as part of its standard equipment. This means that the air connection can be moved over to the opposite side.

PLUS connection is not possible with the MBPS series.

Adapting plate accessory for MBPS:

Depending on the height of the carriage (measure D), an additional adapting plate is required (see table from page 74).
