

HIGH-TEMPERATURE FILTERS TYPE HITEMP

viledon®

EFFICIENT AND RELIABLE
AT HIGH TEMPERATURES

FILTER TYPE	FILTER CLASS TO ISO 16890	FILTER CLASS TO EN 779:2012
HT 10	ISO ePM10 75%	M 6
HT 2.5	ISO ePM2,5 75%	F 8

The application

The principal application for the Viledon® HT10 and HT2.5 High-Temperature Cassette Filters with an overall depth of 292 mm is air filtration in recirculated-air systems used for paint-drying processes in the automotive industry. The filters **meet particularly stringent requirements for air purity, process reliability and cost-efficiency.**

Besides the applications in surface treatment technology, the filters also meet the toughest of quality stipulations in general drying applications.

The characteristics and benefits

- The filters are available in **two frame versions made of galvanized steel sheet: the box type (Type B), and the version with a flanged-on, 25-mm-thick front frame (Type H).**
- Both versions are fitted with **protection grids made of galvanized steel mesh** on both sides, thus ensuring safe and simple handling.

- The filter media used are pleated micro-glass-fiber papers with different fiber finenesses for Filter classes ISO ePM10 75% (M 6) and ISO ePM2,5 75% (F 8). The corrugated aluminium separators with crimped edges, in conjunction with double-layered filter paper at the pleats, provide maximized mechanical strength. This increases **production dependability for the user.**
- The filters are fitted with a thermally ultra-stable, abrasion-proof **textile-glass round cord seal**, either on the upstream or downstream side, as a standard feature. The box versions of these filters can be installed from both up- and down-stream side which reduces stock levels and filter variants.
- They are thermally stable up to **at least 260 °C.** Special types with frames made of aluminium or aluminised sheet metal have a temperature resistance of up to 385 °C.

- Viledon® High-Temperature Cassette Filters satisfy the stringent requirements of **Fire class F1** to DIN 53 438 and are thus **self-extinguishing.** They are also **highly resistant to solvent vapors and are silicone-free.**
- In addition to the standard versions, special variants with different dimensions or frame materials, higher thermal stability or special reinforcement, are available on request.

The special features

- Viledon® High-Temperatur Cassette Filters HT10 and HT2.5 excel in terms of especially high dust holding capacity and very good mechanical sturdiness, even when exposed to inhomogeneous air loadings.
- Thanks to low filter resistance values, very long useful lifetimes can be achieved coupled with exceptionally cost-efficient operating characteristics.

* For cost-efficiency or system-specific reasons it may be appropriate to change the filters before reaching the final pressure drop stated. It can also be exceeded in certain applications.
